

I support RM-10352 to legislate the subdivision of the amateur 160 Meter band into narrow- and wide-band segments. Although CW, PSK-31 and other narrow-band modes can coexist comfortably, they are incompatible with SSB, AM and other wide-band modes. Particularly in the high-noise, marginal propagation environment of MF it is vital that we preserve the ability of narrow-band modes to provide communication when conditions do not support wide-band for many open but marginal paths. Please help us by adopting this proceeding which institutionalizes former "gentlemens' agreements." It is no longer effective to rely on voluntary plans. We, the amateurs of the US, both phone and CW operators, need your help. Thank you very much.
